To Whom It May Concern,

This letter has been written to verify that Battle Creek Montessori Academy is currently utilizing GoGuardian Admin. GoGuardian Admin is ideally suited to help protect public schools enforce CIPA policies in an easy and cost-effective manner. Configuration manages Chromebooks even when outside of the school network while being used for remote learning.

Excerpt from manufacturer website:

“We help thousands of K-12 schools maximize the learning potential of every student. Our software products help educators improve student outcomes, protect students from harmful and distracting content, and support mental health. With GoGuardian, educators can seamlessly connect students with engaging resources, manage instruction, and receive actionable insight into students’ individual learning needs. In addition, many schools use GoGuardian’s software as part of their compliance program with the [Children’s Internet Protection Act](#) (and [state equivalents of CIPA](#)) that requires schools to filter out certain types of harmful images and help monitor for compliance. “

Sincerely,

David Sattler
